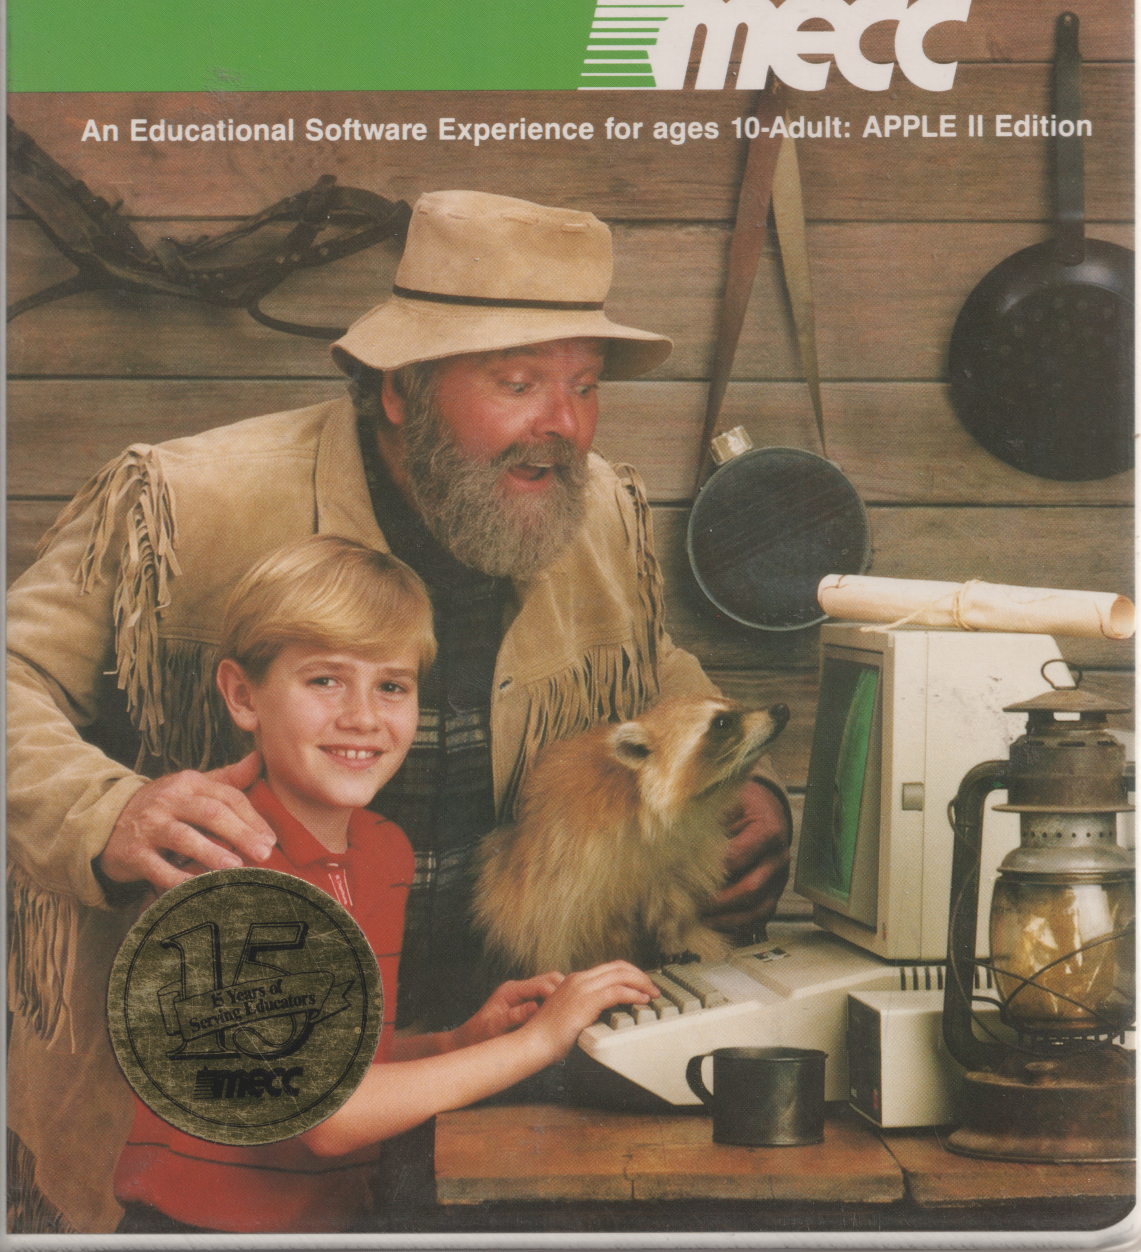
An Educational Software Experience for ages 10-Adult: APPLE II Edition



The Oregon Trail takes you back to when pioneers crossed America by covered wagon.

MECC's classic frontier simulation has now been updated and expanded! Thousands of school children have experienced the excitement of discovering what life was like for early American pioneer families. Now children of all ages can also assume the role of trail-blazers—but in the comfort of their own home!

Youngsters learn about American history while also exercising their imagination and developing their problem-solving skills. They make critical decisions as they plan their cross-country treks and then embark on new adventures. What supplies should they take? Which paths should they follow? What time of year is best for starting the long, hard journey? And what do they do when food or ammunition starts to run low?

Enjoyment of this package will be enhanced by the use of a color monitor.

Random events and many opportunities for choices make every journey unique. Colorful graphics add to the fun, making **The Oregon Trail** a memorable learning adventure for your children.

MECC educational software makes learning pleasant, rewarding, and successful. Over a decade of educational computing experience has brought us worldwide acclaim. Best of all, MECC educational software is easy to use. Contained within this package are an unconditionally guaranteed disk and a helpful booklet that gives directions and explains the program. With MECC, your satisfaction is assured.

Product #H-106. Disk with Instruction Booklet.

For use with Apple II computers (at least 64K).
